

## HashMap and Heap 2

16 October 2022 14:52

### Largest Positive Integer that exist with its negative

Input: nums = [-1, 2, -3, 3] ✓  
Output: 3  
Explanation: 3 is the only valid

Example 2:

Input: nums = [-1, 10, 6, 7, -7, 1] ✓  
Output: 7  
Explanation: Both 1 and 7 have the

Example 3:

Input: nums = [-10, 8, 6, 7, -2, -3] ✓  
Output: -1  
Explanation: There is no a single

set<int> st;

```
int findMaxK(vector<int>& arr)
{
    set<int> st;
    for(auto x : arr)
    {
        if(x < 0)
        {
            st.insert(abs(x));
        }
    }
}
```

the minimum number of elements that must be removed from the beginning of the sequence so that all remaining elements are different.

## B. Rebellion

output: standard output

You have an array  $a$  of size  $n$  consisting only of zeroes and ones. You can do the following operation:

- choose two indices  $1 \leq i, j \leq n$   $i \neq j$  ✓
- add  $a_i$  to  $a_j$  ✓
- remove  $a_i$  from  $a$ .

Note that elements of  $a$  can become bigger than 1 after performing some operations. Also note that  $n$  becomes 1 less after the operation.

What is the minimum number of operations needed to make  $a$  non-decreasing, i. e. that each element is not less than the previous element?

## Intersection of array

## Find First Missing Numbers

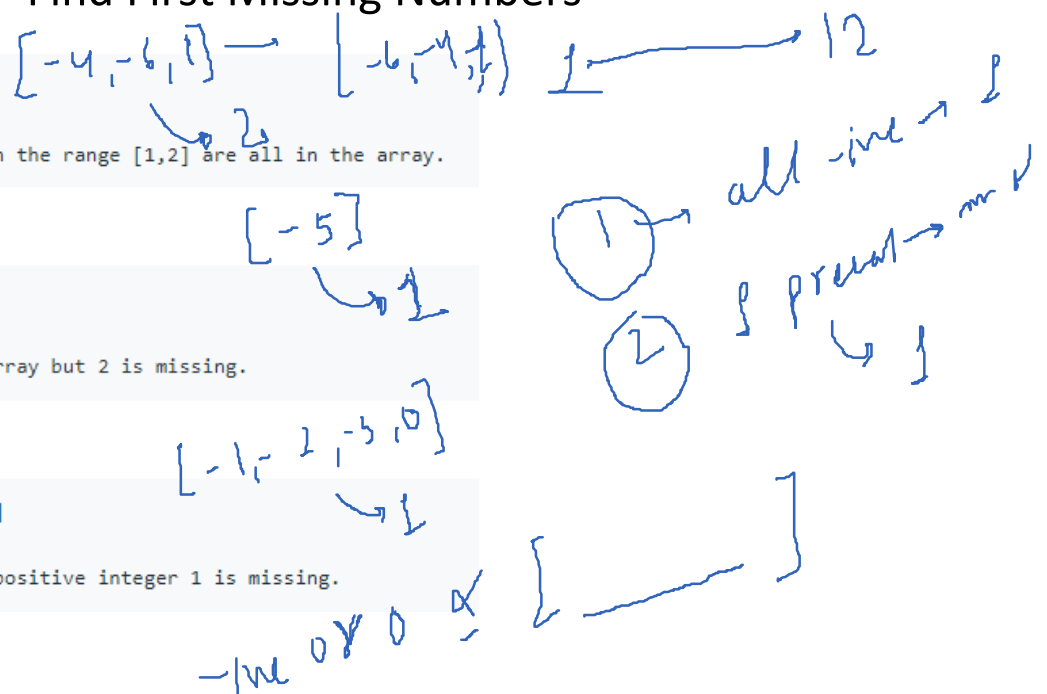

Input: nums = [1, 2, 0]  
 Output: 3  
 Explanation: The numbers in the range [1, 2] are all in the array.

### Example 2:

Input: nums = [3, 4, -1, 1]  
 Output: 2  
 Explanation: 1 is in the array but 2 is missing.

### Example 3:

Input: nums = [7, 8, 9, 11, 12]  
 Output: 1  
 Explanation: The smallest positive integer 1 is missing.

## Uncommon char from two sentence

Input: s1 = "this apple is sweet", s2 = "this apple is sour"  
 Output: ["sweet", "sour"]

### Example 2:

Input: s1 = "apple apple", s2 = "banana"  
 Output: ["banana"]

Output: [ banana ]
